

# Southern States Millwrights: Fueling Productivity in the Power Generation Industry

**The power generation industry** relies on the work of experienced millwrights who work with precision and productivity, because staying competitive means completing outages on time, building quickly and correctly, and maintaining equipment with pinpoint accuracy.

Southern States Millwrights are power generation industry experts with the experience to solve problems and complete tasks with superior skills in the coal, gas, nuclear and alternative-energy power plants such as wind and solar facilities.

At the core of every training course and on the minds of every jobsite crew is safety. A safe work site is achieved only by comprehensive training for every millwright on every project. A full line of safety courses and qualifications are offered to our millwrights every year.

**Our standardized training and mobility** is provided to every apprentice, journeyman, foreman and site superintendent, so that every millwright arrives at every job site with the same set of superior skills.

## Hiring a contractor who employs Southern States Millwrights means:

- **Productivity.** Our skills and experience keep your project on time and on budget.
- **Competitiveness.** Tailor-made contracts and work schedules meet your project's specifications.
- **Reliability.** Disciplined crews arrive where, when, and for as long as they're needed.
- **Accuracy.** Certified specialists are trained in the latest products and techniques.
- **Safety.** Intense safety training helps create the safest possible work site.
- **Leadership.** Foreman and superintendent training is available for solid jobsite leadership.
- **Professionalism.** Union staff members are dedicated to making the project a success.

**Our certified rigger and signaler program is accredited by the National Commission for Certifying Agencies.**

## Quality Work via Quality Training

Our training is grounded at the United Brotherhood of Carpenters' International Training Center. Equipment includes a turbine pit to practice confined-space work, a gas turbine, two steam turbines, two 35-ton overhead bridge cranes over a steam turbine and pit, and four 20-ton overhead bridge cranes. And more equipment is being added every day, to keep our men and women sharp and ready for deployment to any jobsite.

As a result, Southern Millwrights are regarded as being the best trained and most well-prepared for any project in any location.
